DETAILED ACTION

And

REASONS FOR ALLOWANCE

1. Claims 1-4, 6-16, 18-25 and 27-³⁵~~28~~ are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

2.1 While US Patent 6,205,579 *Southgate* discloses remote diagnostics for software, used to program PLD's or (Programmable Logic Devices) and while US Patent 6,047,128 *Zander* discloses remote replacement of software modules in an EEPROM or other storage device, none of these references taken either alone or in combination with the prior art of record disclose, *remotely diagnosing and reconfiguring PLD's or (Programmable Logic Devices)*, which are actual hardware components, specifically including:

(claim 1) "...transmitting diagnostic signals via the access controller to the programmable logic device where the diagnostic signals are received from a network in response to a diagnostic request, the diagnostic control module including logic for collecting output signals generated by the programmable logic device" and "...reconfiguring the programmable logic device."

(claim 13) "...a diagnostic control module for performing a diagnostic test on the programmable logic device in accordance with the diagnostic commands; and a reconfiguration controller in communication with the programmable logic device."

(claim 23) "...transmitting diagnostic commands to the remote electronic system that cause the diagnostic/reconfiguration controller to perform diagnostic tests on the logic device..." and "...receiving the output signals from the remote electronic system over the communications

network;” and “...transmitting reconfiguration commands to the remote electronic system causing the diagnostic/reconfiguration controller to reconfigure the programmable logic device based on the output signals analyzed.”

(claim 29) “...a second interface coupled to the at least one PLD adapted for boundary scan input and output to and from the PLD, wherein the microcontroller is configured to execute first and second software modules, the first software module adapted to apply input and output signals to the at least one PLD responsive to diagnostic control received via the network and transmit output signals from the at least one PLD via the network,” and “...reconfigure the PLD with the configuration data received via the network.”

(claim 32) “...a microcontroller embedded in the device;” and “...storing in a first memory embedded in the device a current configuration data set consistent with states of programmable memory cells that define a logic function implemented by the at least one PLD;” and “...reconfiguring the PLD with the configuration data received via the network.”, in combination with the remaining elements and features of the claimed invention. It is for these reasons that the Applicants’ invention defines over the prior art of record.

2.2 Dependent claims 2-4, 6-12, 14-16, 18-22, 24, 25, 27, 28, 30, 31 and 33-35 are allowed for at least the reasons that they depend from an allowed base claim.

2.3 Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
